Summer Construction

This summer the 1967 portion of our school building, including the gym and cafeteria, will receive a new roof and new heating and air conditioning. New lighting will be installed in the gym and cafeteria. This lighting work will be done by Kohrmann Electric and will complete our conversion of the entire building to more efficient lighting. The entire roof (Kehrer Brothers) of the 1967 building will be removed down to the substructure and replaced with new. New heating and air conditioning (Kohnen Heating and Air) will be installed to increase efficiency and allow us to discontinue using the boiler. New water heaters will be installed for the cafeteria and lavatories as part of the project. Work on all these projects is expected to begin immediately after school is out and continue through much of the summer.
